

Exela EON

A software solution that enables your employees to focus on tasks only humans can complete

Overview

Exela EON is robotic process automation as a service, which creates a virtual workforce that operates alongside with humans to automate structured and repetitive computer-based tasks.

KEY FEATURES

Virtual Workforce

Create task-specific bots that mimic human behavior and learn best practices

Remote Management

EON is web-hosted, which enables users to remotely monitor and control bots from anywhere with an internet connection

Integrable System

EON can be integrated with numerous Exela solutions, as well as third-party systems and applications with ease

24/7 Solution

EON represents an automated solution that will continue to function 24/7/365 and pause only for system adjustments and exception handling

Highly Scalable

Whatever the business need, EON can address it using a team of bots capable of handling multiple processes effectively and accurately

Visibility & Control

Every operation taken by EON's bots is entirely trackable, auditable, and adjustable, which provides improved visibility and control over key business operations

Exela EON

A software solution that enables your employees to focus on tasks only humans can complete

Benefits

Improved Efficiency and Productivity

Reduce processing time upto 40%

Cost Reduction

Decrease overheads and fixed cost (40+%)

Error Reduction

Reduce chances of non-compliance

Scalability

No coding required

Easy to use
